Ideawake

Release Notes of Continuous Delivery

December 20, 2024

🚀 Version 1.20.8 includes highest priority bugs and continuous delivery (CD) tasks

Here are the key implementations and fixes:

1. Profile images were not saving
2. Viewed and participated counts were mismatched on the analytics challenge default analytics
3. XLSX exports were not working when exporting from Gadgets Modal
4. Removed Google analytics / any 3rd party potential tracking from ideawake app
5. Update default configuration for all instances created in future for email frequency send time for CRONS
6. Prefix ID no longer display as "Undefined" on action items dropdown
7. Random sorting option was not working on any of the ideas list pages and 'sort' option was not getting incorporated into URL and not persisting on 'saved views'
8. Previously deleted ideas were visible from global nav / deleted ideas need their own custom message

Detailed Notes For Each Task:

1. Profile images were not saving
   - Profile images are persistent now and intact whether user login via okta or simple login etc
   - Tested and verified ✅

2. Viewed and participation counts were mismatched on the analytics challenge default analytics
   - Analytics Count Mismatch Fix
     - ➢ The "Viewed" and "Participated" counts on the default analytics page for challenges were previously mismatched

➢ The counts for "Viewed" and "Participated" are now correctly aligned and reflect accurate data
- Tested and verified ✅

3. XLSX exports was not working when exporting from gadgets modal
   - Export functionality fix
     ○ When selecting the "XLSX" option in the export modal, the exported file was previously being generated as a CSV file
     ○ The export will now correctly generate an XLSX file when the XLSX option is selected
   - Tested and verified ✅

4. Removed google analytics / any 3rd party potential tracking from ideawake app
   - Google analytics removal
   - Sanity's being conducted to check the ripple of removing google analytics
   - Tested and verified ✅

5. Updated default configuration for all instances created in future for email frequency send time for CRONS
   - Sending frequency default is now changed for action items and action items reminder email
   - Workflow submission's label and subject line has changed to "Submission confirmation email" including the subject line as well
   - Tested and verified ✅

6. Prefix ID no longer displays as "Undefined" on action items dropdown
   - Prefixes appear to be correct now
   - Works well after edit as well
   - Tested and verified ✅

7. Random sorting option were not working on any of the ideas list pages and 'sort' option was not incorporated into URL as well as not persisting on 'saved views'
   - When random filter applied, system was fetching different lists of ideas every time and also when page was refreshed for ideas list table, card and pipeline views at challenge level

- Filter now appends in URL and even user navigates to the other page and gets back and then applies the random sorting filter, each time filter is applied fetches random results different than the previous ones
- User saves the view and applies that saved view, filters appear correctly but data can vary inside those filters
- Tested and verified ✅

8. Previously deleted ideas visible from global nav / deleted ideas needed their own custom message
    - Improved visibility of deleted Ideas
        - Deleted ideas will no longer appear in the navigation search dropdown.
        - Deleted ideas will be excluded from the global search results
    - Custom message for redirected users
        - Users attempting to access a deleted idea will now be redirected to a page displaying a custom message, clearly informing them that the idea has been deleted, rather than showing a generic "no access" message
        - Tested and verified ✅
