4. Changed profile modal size and UX Enhancements for user roles
5. Issue with groups list resolved when creating new groups or when multiple users added to a new group
6. Improved skeleton loader alignment & height to prevent UI shift

## **CD Tasks Details:**

### **1. Updated logo on universal loader to community header logo**

- The universal loader has been replaced with the community header logo
- Now whenever idea loads, users will see the community header logo instead of the universal loader for increased customization.

### **2. When clicking on challenge title user now directed to the correct tab**

- Fixed navigation issue where clicking the challenge name opened the settings modal.
- Now, clicking the challenge name correctly opens the details modal.

### **3. Linking of ideas - Users can no longer link ideas. Only challenge/ community admins/moderators are be able to**

- The 'link ideas' button and dropdown option in the Idea modal are now visible only to Community Admins, Community Moderators, Challenge Admins, and Challenge Moderators.
- Users and observers without admin or moderator rights can no longer link ideas at the community or challenge level.

### **4. "Multiple Replies to a comment" email template added to frontend and is editable by admins**

- Introduced a new email template, 'Multiple Replies to a Comment' for reminder emails sent when multiple users comment on an idea.
- This template is now available on the 'Manage Emails' page under community settings and can be viewed and edited by community admins.

### **5. Ideal spec sizes on platform for logos on appearance settings included**

- Previously, there was no clear indication of the ideal logo size.
- Users can now preview how the logo will display, improving the UX experience for uploading correctly sized images.

## **Bugs Fixed Details:**

### **1. Resolved Terms and Conditions customization bug**

- Changes to Terms & Conditions, and community settings now save and display correctly for new users.

### **2. Fixed provisioning of employee position in SFTP file provisioning process**

- Fixed an issue in file provisioning where the **Current Position/Title** column was missing from the CSV template.
- The **Current Position** column has now been added to the CSV template and is optional during upload.
- If provided, the value appears in the user profile under **Current Position**; otherwise, it shows as N/A.

### **3. Added in validation check when user changes featured image settings on challenge settings modal and then navigates to another tab**

- Formerly, when a user enabled the **'feature image'** in challenge settings and navigated to another tab, the changes were not saved due to the absence of save/update confirmation.
- Currently, whenever any setting is modified, a confirmation modal appears to ensure changes are saved before the user navigates to another tab.

### **4. Changed profile modal size and UX Enhancements for user roles**

- Fixed the **Edit Profile modal header responsiveness** issue; the header now adapts correctly to different screen sizes.
- Resolved the **Groups chip visibility issue for User-role accounts**; the chip is now visible and shown in a disabled state.

### **6. Issue with groups list resolved when creating new groups or when multiple users added to a new group**

- The added users count now updates immediately on the group listing page, eliminating the need for a screen refresh.

### **7. Improved skeleton loader alignment & height to prevent UI shift**

- Fixed an issue where skeleton loaders did not match the actual UI layout, causing layout shifts when content loaded.
- Updated skeleton loader alignment and height to closely mirror final components for a smoother loading experience.
- Improved the Challenge Settings skeleton loader so it now accurately reflects the real UI elements.
