

Ideawake Release Notes – Batch 41.3-CD

Release Date: 01/21/2026

CD Tasks:

1. SSO basic settings page configuration settings now allows groups field to be mapped to multiple times in custom claims
2. Set all new community default settings for email notifications to be sent out every 0 hours instead of 1 for new platforms
3. Updated standard template images for all future communities for email notifications for new platforms
4. Added sorting and filter options to the 'manage users' list page
5. Can now see who is following challenges and ideas
6. Added Japanese language translation file to language options

Bugs Fixed:

1. Submitter column on all ideas table view page correctly lists the submitters name rather than 'co-submitter disabled'
2. Description label does not display unless description has a value on idea pages
3. Table list updated at community and challenge levels
4. User no longer needs to refresh page to see changes made to "additional brief" section on challenge settings view page when editing from the "quick edit" option
5. Jumbotron bugs resolved

CD Tasks Details:

1. SSO basic settings page configuration settings now allows groups field to be mapped to multiple times in custom claims

- Updated configuration to allow multi-select for groups. This resolves the previous limitation where groups could not be selected more than once and improves flexibility when setting up group-based mappings.

2. Set all new community default settings for email notifications to be sent out every 0 hours instead of 1 for new platforms

- Email frequencies are now automated. All emails are sent instantly by default, except the new submission digest which remains hourly. This removes the need to manually update email settings for each new customer.

3. Updated standard template images for all future communities for email notifications for new platforms

- From now on, all new community emails will include the updated images as provided. This change has been verified across all types of emails. No images are broken or missing. Users will now see the updated design images in their emails exactly as specified in new communities.

4. Added sorting and filter options to the 'manage users' list page

- Available only for admin.
- Admins can now filter and sort users as needed.

5. Can now see who is following challenges and ideas

- Now followers are appearing with the correct action performed by the user (Idea Posting, Comment & Vote) and exports are also working fine.

6. Added japanese language translation file to language options

- We have added the Japanese language conversion on user profile and community level.

Bugs Fixed Details:

1. Submitter column on all ideas table view page correctly lists the submitters name rather than 'co-submitter disabled'

- If co-submitters is disabled, that should only impact the ability to add co-submitters. The table list view no longer lists 'co submitters disabled', under the submitter column. It now only disables the ability to add a co-submitter and submitters names should still appear on the column of table view if it is disabled.

2. Description label does not display unless description has a value on idea pages

- Verified: Description label no longer appears when the field is disabled at the challenge level.

3. Table list updated at community and challenge levels

- Hide select unselect checkbox on idea listing page for user role.

4. User no longer needs to refresh page to see changes made to "additional brief" section on challenge settings view page when editing from the "quick edit" option

- Updated quick edit behavior for challenge 'additional brief'.
- Changes now reflect instantly after clicking save button.
- No page refresh required for updated content to appear.

5. Jumbotron bugs resolved

- Jumbotron edit text is no longer required (optional now).
- Default text will now appear for new communities.
- Added a minimum width for the jumbotron image so it doesn't collapse.
- Text box sizes are standardized — they won't collapse beyond limit anymore.
