

Ideawake Release Notes – Batch 41.4-CD

Release Date: 02/12/2026

CD Tasks:

1. Emails are now sorted alphabetically on the 'manage emails' tab
2. Full name now displays up on list pages and idea pages unless multiple people are assigned
3. Added Russian translation file and language option to platform
4. Added automation action under collaboration settings to disable or enable idea editing when an idea changes stage AND automation for 'change challenge'
5. Upgraded flatfile version
6. Added subtasks and milestones data to the default columns on the ideas list table page
7. When view is updated to see '100 users' on the 'manage users' page, setting sticks for better UX for admin management
8. Cloning workflow copies the original workflow without re-ordering stages
9. Improved UX on challenge homepage to only display active workflow(s) of the specific challenge
10. Field label and placeholders for title now displaying on embed form set-up

Bugs Fixed:

1. When activity log is enabled, it no longer displaying HTML text
2. User profile initials on profile pic will update when name is updated
3. Kanban view is now displaying correct number of ideas
4. User no longer needs to refresh page after applying filter

CD Tasks Details:

1. Emails are now sorted alphabetically on the 'manage emails' tab

- Previously our email listing page was not sorted alphabetically.

2. Full name now displays up on list pages and idea pages unless multiple people are assigned

- Improved user display logic for Owner, Team Member, and Co-Submitter roles.
- If a single user is assigned, the UI now displays the full name on the user icon.
- Multi-user scenarios continue to display icons only to preserve current UX.

3. Added Russian translation file and language option to platform

- We have added Russian language conversion on user profile and community level.

4. Added automation action under collaboration settings to disable or enable idea editing when an idea changes stage AND automation for 'change challenge'

- Idea editing control is now automated through workflow-based automations.
- Admins can configure rules from 'challenge visibility' settings to automatically enable or disable idea editing at specific workflow stages, eliminating the need for manual updates and ensuring consistent behavior across the system.

5. Upgraded flatfile version

- Enhanced idea import with AI-based auto field mapping and manual editing support.
- Validation errors are highlighted for correction before bulk idea submission.
- Added AI command modal for custom field mapping instructions.

6. Added subtasks and milestones data to the default columns on the ideas list table page

- Milestone & task count is displayed in realtime on the table list page and pipeline view.

7. When view is updated to see '100 users' on the 'manage users' page, setting sticks for improved admin user experience

- Improved bulk user management experience.
- User list now retains the selected view (e.g., 100 users) after role updates or deletions instead of reverting to the default 10-user view.
- Enhances admin workflow efficiency and consistency.

8. Cloning workflow copies the original workflow without re-ordering stages

- Workflow cloning now consistently preserves the correct stage sequence regardless of the number of stages.

9. Improved UX on challenge homepage to only display active workflow(s) of the specific challenge

- Challenge homepage will only display active workflow titles on the filter feature for simplicity

10. Field label and placeholders for title now displaying on embed form set-up

- Label and placeholder updates now display accurately, ensuring clarity and consistency for admins and users.

Bugs Fixed Details:

1. When activity log is enabled, it no longer displaying HTML text

- Fixed an issue where unnecessary code-like text appeared in the activity log during stage changes with notifications enabled, improving overall readability.

2. User profile initials on profile pic will update when name is updated

- Resolved.

3. Kanban view is now displaying correct number of ideas

- Fixed an issue where the Kanban pipeline showed a higher idea count than the actual total submissions.
- Submission counts are now accurately aligned between the total submissions and Kanban views.

4. User no longer needs to refresh page after applying filter

- Now whenever filter will be applied on idea listing it will be reflected in real time
- User would not have to refresh page
