

Ideawake Release Notes – Batch 42.0-CD

Release Date: 07/03/2026

CD Tasks:

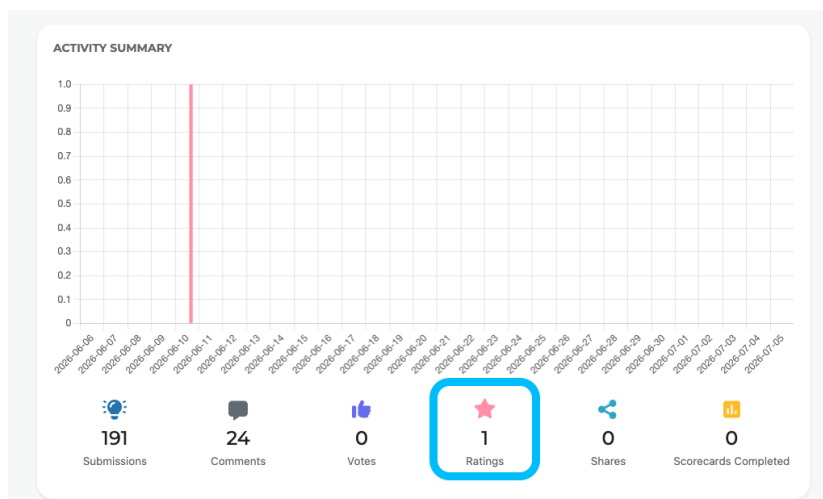

1. Added star rating counts everywhere votes were in the platform.
2. When milestones & tasks are enabled - the system now defaults to the 'about' tab on no action stages, and the 'add information stage' tab for refinement/scorecard stages for assignees.
3. Reduced actions column width on ideas list table.

Bugs Fixed:

1. Empty comment no longer saves when content is removed after edit.
2. Resolved issue when more than two participation rate behaviors are completed - system throws 0%.
3. Can now assign experience points to owners, team members, submitters, co-submitters for status changes.
4. Averages now displayed in scorecard evaluations modal for individual ideas.
5. Optimized / Fixed issues on the user list page.
6. Adding to bookmarks now works on ideas list simple pages.
7. Tooltip displays translation keys instead of localized text.

CD Tasks Details:

1. **Added star rating counts everywhere votes were in the platform.**
 - The analytics section now includes a dedicated pink star rating icon and corresponding pink rating bar at both the community and challenge levels. Also, exports are generated correctly from the challenge engagement area.

2. When milestones & tasks are enabled - the system now defaults to the 'about' tab on no action stages, and the 'add information stage' tab for refinement/scorecard stages for assignees.

- The default landing tab has been updated to provide a more intuitive user experience when Milestones & Tasks are enabled. Users assigned to the active workflow stage action are automatically directed to the appropriate Add Information or Evaluate tab, while all other users are taken to the About tab.

3. Reduced actions column width on ideas list table.

- The idea listing page has been enhanced at both the Community and Challenge levels with improved column widths for better readability and consistency. Additionally, the label "Co-submitter" has been updated to "Submitter" in Post Type Settings to maintain consistent terminology across the platform.

Bugs Fixed Details:

1. Empty comment no longer saves when content is removed after edit.

- The system now correctly prevents users from saving empty comments and displays the appropriate validation message, ensuring only valid comment content can be submitted.

2. Resolved issue when more than two participation rate behaviors are completed - system throws 0%.

- The Participant Rate calculation has been corrected to accurately display results when multiple participation metrics are selected. Previously, the calculation incorrectly returned 0% under these scenarios, it now reflects the correct participation rate across all selected metrics.

3. Can now assign experience points to owners, team members, submitters, co-submitters for status changes.

- Experience points are now correctly awarded to assigned Idea Owners, Co-submitters, and Team Members, in addition to the Submitter, whenever an idea progresses through a workflow stage. This ensures all assigned participants receive the appropriate experience points based on the configured Global Status.

4. Averages now displayed in scorecard evaluations modal for individual ideas.

- Individual average scores are now correctly displayed in the scorecard evaluation modal for individual ideas, ensuring average scoring information is visible and accurate during evaluation review.

5. Optimized / Fixed issues on the user list page.

- Resolved multiple issues on the Users List page to improve usability and consistency. Horizontal scrolling now works correctly with the first and last columns remaining sticky. The Manage column remains accessible after applying filters, long user names and group lists are displayed with proper truncation and hover tooltips, user statuses are shown consistently across all tabs. The Status filter is available only on the All Users tab with the Archived option removed, and each user tab displays the correct users and available actions.

6. Adding to bookmarks now works on ideas list simple pages.

- Bookmark actions on the Ideas List page now save successfully without triggering an unnecessary page reload, providing a smoother and more reliable user experience.

7. Tooltip displays translation keys instead of localized text.

- Resolved a localization issue where the Private field tooltip displayed the translation key instead of the translated text after changing the platform language. The tooltip now correctly displays the localized content across supported languages.
